*Allowable Subject Matter*

1. Claims 1-25 are allowed. Claims 26-53 were previously cancelled.

2. The following is an Examiner's Statement of Reasons for Allowance:

In interpreting the claims, in light of the specification and the applicants' arguments, the examiner finds the claimed invention to be patentably distinct from the prior art of record.

The prior art of record teaches a network management system that displays lists of events occurring in the network to a graphical user interface. Specifically, Sugauchi teaches a network management tool for displaying a list of network events. In order to enable efficient viewing of the list by the user, the system of Sugauchi sorts the events, highlights or underlines new event information. In the same field of endeavor, Roytman teaches a network management system for displaying a list of network events. Roytman teaches displaying a Summary View of the events as well as a display window comprising a full list of the events. The events are filtered and sorted based on selected criteria including date and time to enable efficient viewing by the user. See Roytman, paragraphs 0042-0049. The Summary View of Roytman does not comprise a list of events, but a summary of the listed events.

However, the prior art of record fails to teach or suggest individually or in combination a system and method for managing a network comprising simultaneously providing a first list and a second list of events to a graphical user interface, wherein the second list comprises a predetermined number of recent events.
